

## Contents

- (1) General overview
- (2) Methods to record heteronuclei
- (3) Heteronuclei part 1 – spin  $\frac{1}{2}$  isotopes
- (4) Heteronuclei part 2 – spin  $> \frac{1}{2}$  isotopes
- (5) Paramagnetism
- (6) Applications in coordination chemistry
- (7) Applications in organometallic chemistry
- (8) Applications in bioinorganic chemistry and biochemistry
